Company Background

KEEP MOVING is a professional apparel company integrating fabric development, garment manufacturing, and supply chain management. With extensive experience serving international markets including Japan, South Korea, Europe, and the United States, the company provides global customers with high-quality, efficient, and comprehensive one-stop apparel solutions.

Originating in Qingpu, Shanghai, KEEP MOVING initially built its foundation through orders from the Japanese market. Leveraging Shanghai's mature garment manufacturing expertise and experienced technical team, the company has long been dedicated to high-quality apparel production, with particular strengths in complex craftsmanship, designer collections, and the development and manufacturing of premium knitwear and woven garments.

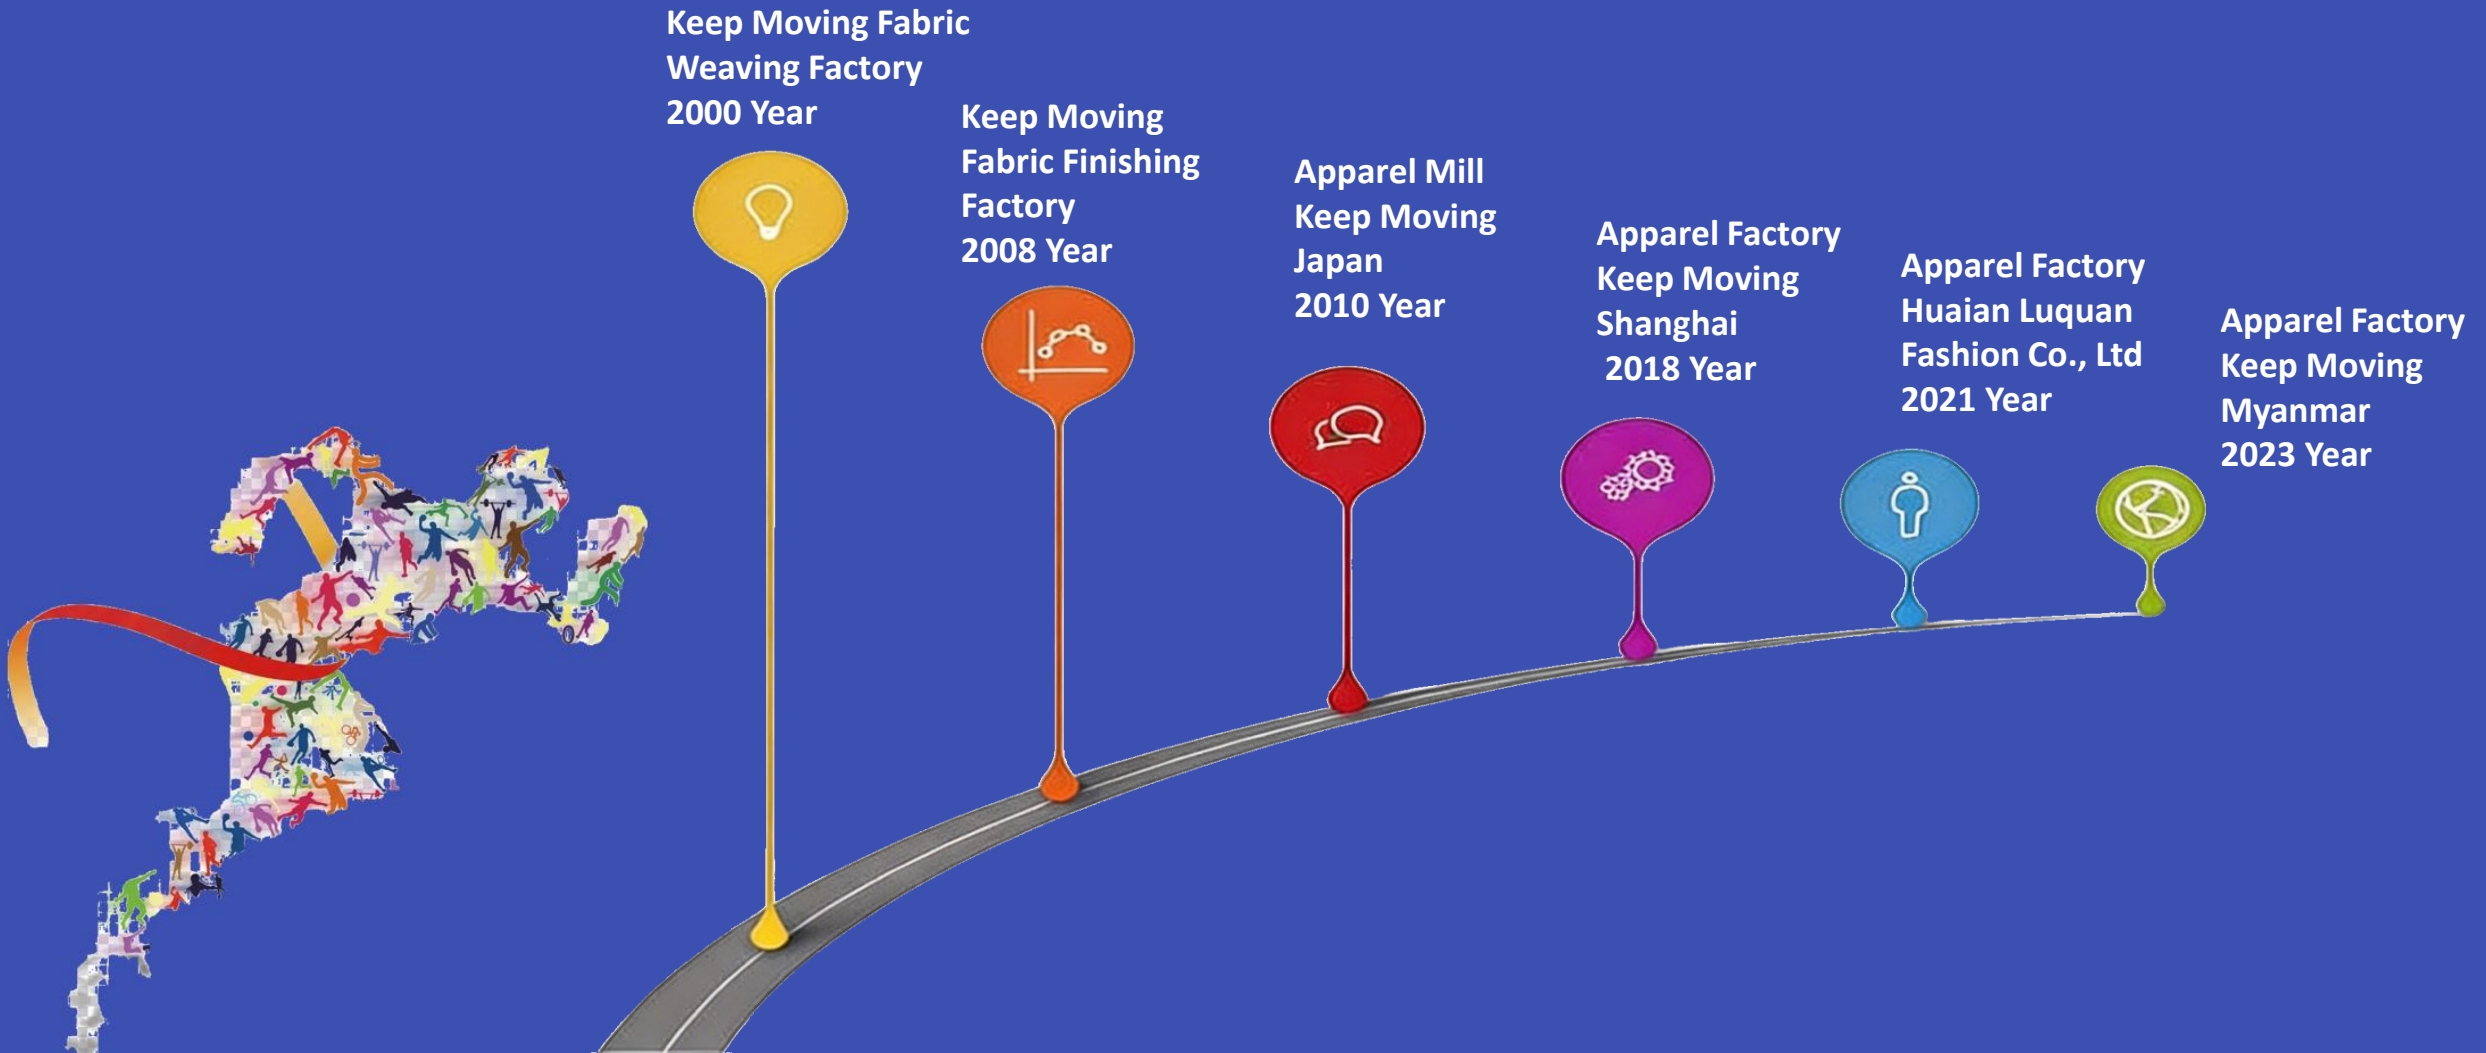

Over years of development, the company has established a stable global manufacturing network. In China, KEEP MOVING operates a garment factory with strong production capabilities and a team of over 200 skilled employees. To better serve customers in Europe and the U.S. markets with enhanced capacity, shorter lead times, and optimized supply chain solutions, the company established a modern garment manufacturing facility in Myanmar two years ago, supported by a professional production team of more than 800 employees. The Chinese management team is permanently based in Myanmar, overseeing factory operations, production management, quality control, and supply chain coordination to ensure stable and efficient manufacturing services for global customers.

Beyond garment manufacturing, KEEP MOVING owns a professional fabric mill with nearly 30 years of industry experience. The mill operates a complete production system covering yarn development, fabric innovation, weaving, dyeing, finishing, and post-processing. With extensive technical expertise in woven fabrics, the company is capable of developing customized fabrics with various materials, structures, functional features, and special finishing techniques according to customers' requirements, providing strong support from the source of product development.

Through its integrated fabric-to-garment supply chain system, KEEP MOVING effectively improves product development efficiency, optimizes production costs, and responds quickly to evolving global market demands. With years of international market experience, professional manufacturing capabilities, and a commitment to continuous innovation, KEEP MOVING is continuously strengthening its global competitiveness and becoming a trusted long-term partner for international apparel brands.

Company Timelines

- Break Through to Launch · Lay Foundation for Growth

Fabric Innovation & Expertise

It all starts with one single yarn —
the foundation of quality, innovation, and craftsmanship.

Keep Moving Fabric

Shanghai Keep Moving Import & Export Co., Ltd. boasts two-decade expertise in textiles. Upholding the “KEEP MOVING” spirit, we have evolved from pure trading into a full-chain enterprise integrating R&D, manufacturing and trade. With premium equipment, strict quality control and global service networks, we deliver one-stop textile solutions from yarn to finished fabrics for worldwide clients. Our products sell well across Europe, America, Japan, South Korea and Southeast Asia.

FUNCTIONAL FABRIC TECHNOLOGY

Through advanced textile engineering and functional finishes, our fabrics deliver multi-performance solutions for outdoor, activewear, and everyday apparel, combining protection with exceptional comfort.

- **Water Repellent & Waterproof**
- **Breathable & Moisture Permeable**
- **Windproof & Thermal Insulation**
- **Abrasion Resistant & Tear Resistant**
- **UV Protection**
- **Flame Retardant • Antibacterial • Anti-Static**

WEAVING CAPABILITY

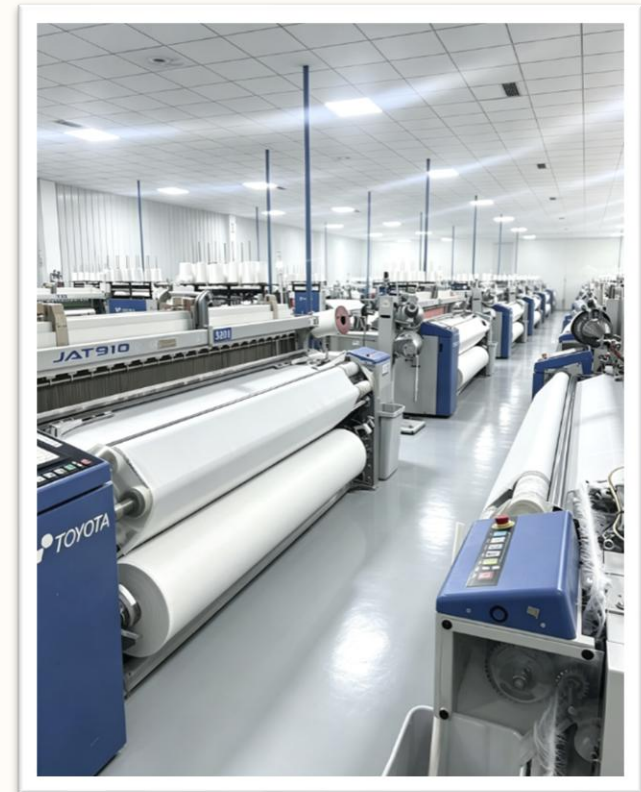

Germany Stäubli Automatic Drawing-in Machine

Automatically threads warp yarns into heddles and reeds for weaving preparation.

Automatic Fabric Transport System

Automated fabric transportation improves production efficiency, minimizes manual handling, and ensures smooth, continuous workflow.

Equipped with high-speed air-jet looms from leading global brands such as TOYOTA, we operate a large-scale, intelligent weaving base. We work with cotton, polyester, nylon, TC blends and functional filament yarns. Specializing in high-count high-density, double-layer and multi-arm jacquard fabrics, we deliver consistent grey-sheet quality and reliable lead-time. Customization is available for fabric weight, width and weave structure per client requirements.

Fabric Setting & Finishing

Installed with advanced finishing technology, we deliver precision heat setting, lamination, and a wide range of functional fabric treatments. Our capabilities include waterproof, breathable, water-repellent, windproof, and customized performance finishes to meet diverse market requirements. Consistent quality and technical innovation ensure reliable performance in every fabric we produce.
